Work Experience

Research Engineer III

July 2025 - Present

Etegent Technologies Ltd. – Cincinnati, OH

- Principal developer of an interactive web application for an aerodynamics modeling tool using a Python (FastAPI) backend and React + three.js frontend.
- Manages customer reporting and resource planning / budgeting for a small team.
- Works with several small development teams to deliver new features to a variety of Python and React projects, as dictated by customer needs.
- Supervises and mentors multiple engineers, providing support via frequent code reviews as well as performance reviews and career goal planning.

Research Engineer II

September 2020 – July 2025

Etegent Technologies Ltd. – Cincinnati, OH

- Led the full-stack development of a geospatial data analysis web application, written using a C#/.NET6 + PostgreSQL backend and Angular frontend.
- Designed an extensible plugin-based system to load a variety of geospatial data formats (e.g, KML, ESRI Shapefile, GeoJSON, GML, CSV) into a common format.
- Created a PyQt6 application that enabled data analysts to quickly plot and correct track data produced by an automated system.
- Created robust GitLab CI/CD pipelines, including reusable templates, for 10+ projects to automate testing, deployment, and other routine tasks.

Junior Engineer

August 2017 - August 2020

Etegent Technologies Ltd. — Cincinnati, OH

- Significantly contributed to the transition of a complex MATLAB-based geospatial data visualization GUI to a web app.
- Created an interface to serialize MATLAB classes and structures to XML and JSON.

Education

Bachelor of Science | Computer Science

Class of 2021

University of Cincinnati

Technical Skills

Web: TypeScript, React, Angular, Material UI, Bootstrap, CesiumJS, three.js
Python: PyQt6, FastAPI, NumPy, Pandas, Plotly, SQLAlchemy, pylint, pytest
.NET C#, .NET Core 3.0 → .NET 7, EF Core, SignalR, xUnit, BenchmarkDotNet
Other: GitLab CI/CD, PostgreSQL, MATLAB, Bash, C++, Docker, Apache
